1. Executive Summary

Pakistan Telecommunication Authority (PTA) has carried out Quality of Service (QoS) Survey of **66** x unique operators in **34** x major cities of Pakistan during 3rd Quarter 2025. During the survey, the performance of fixedline broadband operators have been assessed in accordance with the Fixedline Broadband Regulation, 2022. Operator wise & City wise summary of operators are mentioned below:

Operator Wise – Compliance Status

Sr No.	Company Name	City	Overall Score	Percentage Compliance (%)	Compliance Status
1	Multi City Broadband (Pvt.) Ltd.	Attock	6	100.00	↑
2	Digital Plus Internet Services	Rawalpindi	6	100.00	↑
3	The Professional Communications (Pvt.) Ltd.	Rawalpindi	6	100.00	↑
4	Waylink (Pvt.) Limited	Rawalpindi	6	100.00	↑
5	Laser Communication (Pvt.) Limited	Multan	6	100.00	↑
6	Airmax (Pvt.) Ltd.	Haripur	3	50.00	↓
7	Cyber Internet Services (Pvt.) Ltd	Haripur	5	83.33	→
8	New Millennium Networks	Haripur	5	83.33	→
9	Airmax (Pvt.) Ltd.	Abbottabad	4	66.67	↓
10	Cyber Internet Services (Pvt.) Ltd	Abbottabad	6	100.00	↑
11	Enigma Fibers	Abbottabad	5	83.33	→
12	Global Xperts	Abbottabad	6	100.00	↑
13	New Millennium Networks (Pvt.) Ltd	Abbottabad	4	66.67	↓
14	Pace Telecom and Broadcasting (Pvt.) Ltd.	Abbottabad	5	83.33	→

Sr No.	Company Name	City	Overall Score	Percentage Compliance (%)	Compliance Status
15	5GWifi Communication	Havelian	4	66.67	↓
16	SCO	Gilgit	6	100.00	↑
17	SCO	Astore	6	100.00	↑
18	SCO	Chilas	6	100.00	↑
19	SCO	Ghizer	6	100.00	↑
20	SCO	Hunza	6	100.00	↑
21	SCO	Skardu	6	100.00	↑
22	SCO	Shigar	6	100.00	↑
23	Dot 99 (Pvt.) Ltd	Karachi	5	83.33	→
24	Fiber Beam (Pvt.) Ltd	Karachi	5	83.33	→
25	Galaxy Technology	Karachi	6	100.00	↑
26	Gemnet Enterprise Solutions (Pvt.) Ltd	Karachi	6	100.00	↑
27	Logon Broadband Pvt Ltd	Karachi	5	83.33	→
28	Mynet Broadband Pvt Ltd	Karachi	5	83.33	→
29	Netsol Connect (Pvt.) Limited	Karachi	6	100.00	↑
30	Broadband Business Ideas (Pvt.) Limited	Matiari	5	83.33	→
31	Hyderabad Cable Communication (Pvt.) Limited	Hyderabad	6	100.00	↑
32	Gull Technologies (Pvt.) Limited	Mirpur	5	83.33	→

Note: Red Highlighted KPIs are non-complied.

2. Background

The **Fixedline Quality of Service (QoS)** surveys for fixedline operators are conducted to assess the performance, reliability, and user satisfaction of fixed-line broadband services across Pakistan. This survey aims to understand how well service providers meet the regulatory benchmarks and consumer expectations for internet speed, connectivity stability, and customer support. As fixed-line broadband plays a crucial role in both personal and business communication, ensuring high-quality service is critical for the continued growth of digital infrastructure.

These Surveys across Pakistan are governed by the "Fixed Broadband Quality of Service Regulations, 2022." The regulations were enacted to set **Key Performance Indicators (KPIs)** that BSPs must meet to ensure reliable and high-quality fixed broadband services across Pakistan. These KPIs serve as measurable benchmarks to assess the service quality delivered to customers, including aspects such as network uptime, data throughput, latency, jitter, packet loss, and customer service responsiveness.

3. Scope

QoS surveys are crucial tools for measuring the performance of broadband networks in Pakistan, ensuring service providers adhere to high standards, and continually improving the availability and quality of internet services for consumers. These surveys cover all fixed broadband technologies in use, such as xDSL, DSL, copper and fiber optics technologies. The regulations apply to all BSPs operating in Pakistan, requiring them to maintain **minimum service standards** at various levels of their networks—from access nodes to core nodes.

These surveys also provide critical data on network performance, helping identify gaps and inefficiencies in service delivery. This helps regulatory authorities enforce service standards and ensure BSPs meet the requirements for customer satisfaction.

By regularly testing and publishing the results of broadband services, the PTA promotes **transparency**. BSPs are held accountable for their network performance, fostering competition and driving improvements in broadband services.

By gauging factors such as **download/upload speeds**, network latency, and customer service efficiency, the surveys enable BSPs to improve their networks, which directly impacts the **user experience**.

4. Methodology

The **Quarter 03 2025 surveys** started from July 1, 2025 till September 30, 2025. In the surveys, **66 x major BSPs** are inspected, operating in **34 x cities** across Pakistan. These cities are selected based on their high subscriber density, ensuring that the surveys focused on areas where the quality of service would have the most significant impact. The surveyed cities include:

i. Abbottabad	xiii. Hunza	xxv. Muzaffarabad
ii. Astore	xiv. Hyderabad	xxvi. Peshawar
iii. Attock	xv. Karachi	xxvii. Quetta
iv. Bahawalpur	xvi. Khairpur	xxviii. Rawalpindi
v. Chilas	xvii. Kot Jamel	xxix. Sargodha
vi. Faisalabad	xviii. Kotli	xxx. Sehnsa
vii. Ghizer	xix. Lahore	xxxi. Shigar
viii. Gilgit	xx. Mardan	xxxii. Shikarpur
ix. Gujjar Khan	xxi. Matiari	xxxiii. Skardu
x. Haripur	xxii. Mian Channu	xxxiv. Sukkur
xi. Havelian	xxiii. Mirpur	
xii. Hub	xxiv. Multan	

The surveys are conducted by the **Enforcement Division team** of the PTA at the **Network Operation Centers (NOCs)** of each BSP. This method allowed for real-time assessments of network performance across various parameters, offering a detailed insight into the performance of fixed broadband networks at a deeper, technical level.

5. Parameters Monitored and Survey Results

Following key network performance parameters are checked during the surveys:

- i. Bandwidth Utilization
- ii. Network Availability
 - a) Core Nodes
 - b) Access Nodes
- iii. Network Latency / Round Trip Time (RTT)
 - a) Local Network Latency
 - b) International Segment – Terrestrial

iv. Jitter

Below mentioned are details of Network level parameters measurement details along with survey results:

i. Bandwidth Utilization

This measures how effectively the network’s capacity is being used. It is the ratio of peak utilization of bandwidth to the total bandwidth available.

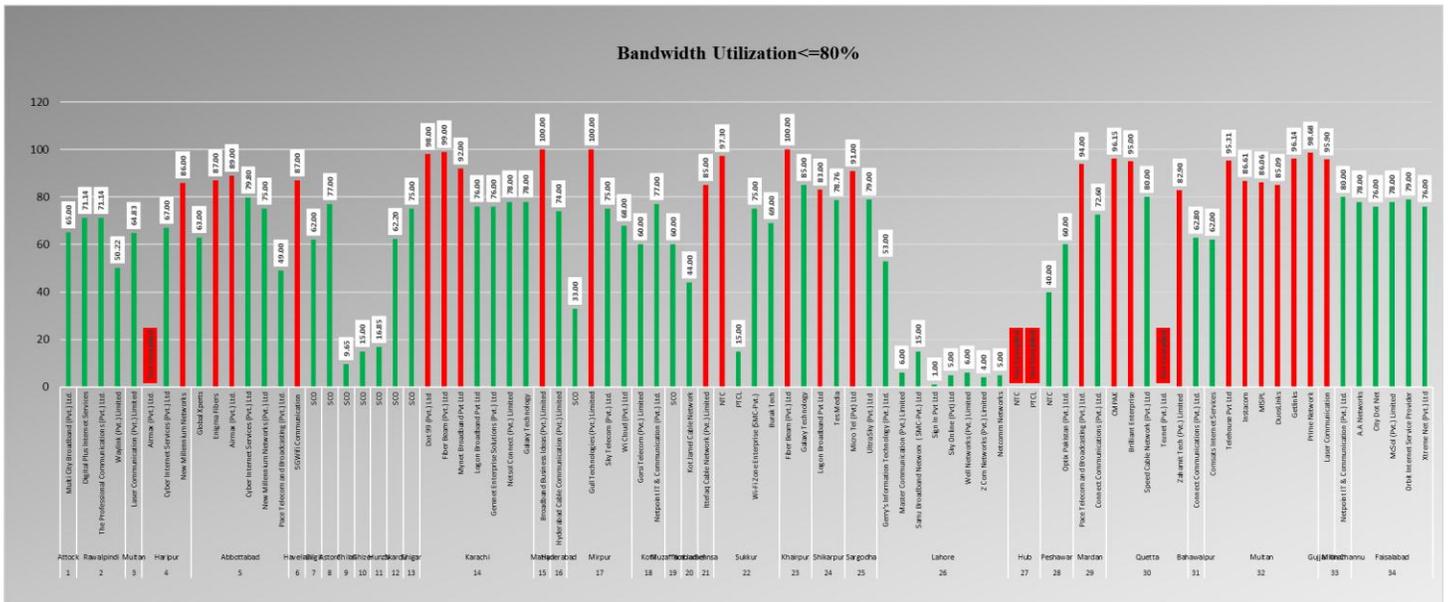

Benchmark:

The bandwidth utilization should be < 80%

Measurement

BSPs are required to run “Daily” MRTG (Multi Router Traffic Grapher) Graphs at 5-minute average during peak hours. The highest bandwidth utilization is the peak utilization level for each month. BASPs are required to run “Monthly” MRTG Graphs to obtain average bandwidth utilization for each month for their network. BSPs should closely monitor their links and the loading level shall not exceed.

Bandwidth Utilization = (Peak Utilization level of the network / Total bandwidth available) x 100%

Results

Bandwidth utilization for most of the operators is compiled and is below 80%.

ii. Network Availability

Network Availability is the measure of the degree to which the network (Access and Core) is operable and not in a state of failure or outage at any point of time.

It measures the total downtime of the network, including the ATM/IP switches, multiplexers, routers, e-mail facilities (if provided) and connection to Internet backbone over a month. All scheduled downtime for the purposes of maintenance and upgrading of the network system will be excluded from the calculation.

Benchmark

Network Availability for:

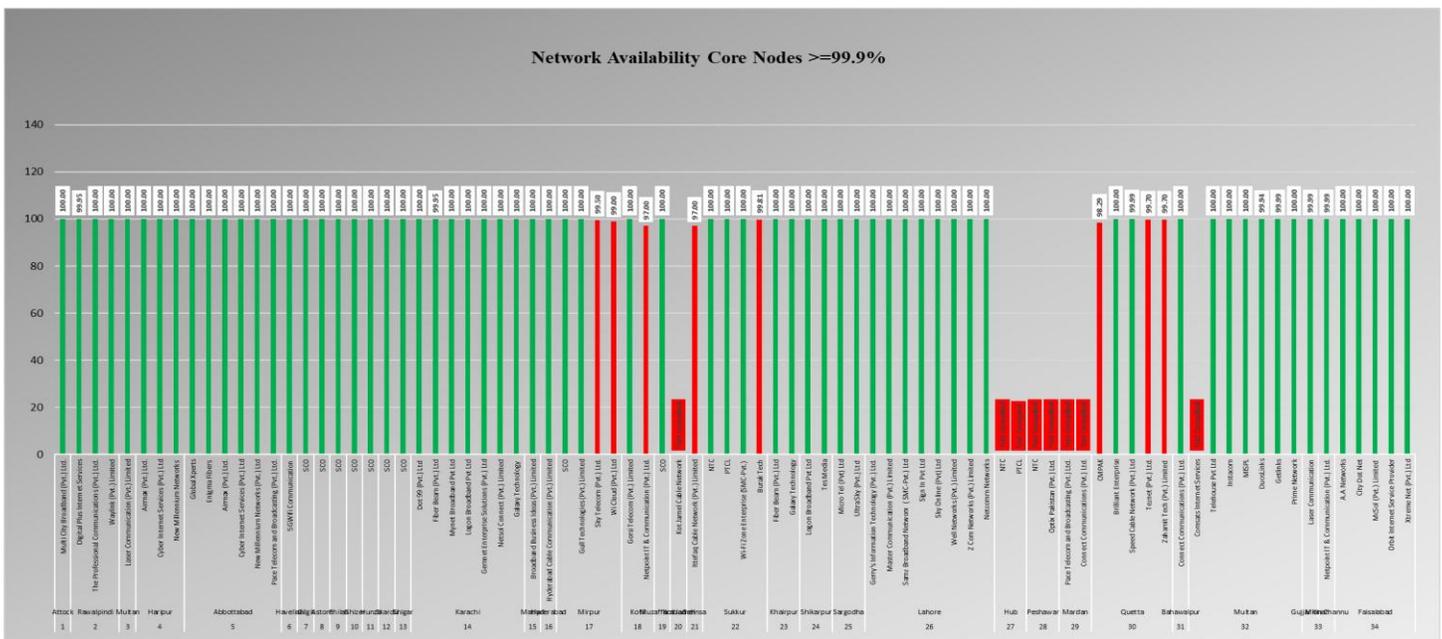

- a) Access Nodes should be > 99% and for;
- b) Core Nodes should be > 99.9%

Measurement

Network Availability = (Total operational minutes - Total minutes of service downtime) / (Total operational minutes) x 100%

a) Network Availability – Core Nodes

Core Nodes include BRAS, Metro Ethernet Switches, routers etc. along with their Operational Minutes and Down Time Minutes.

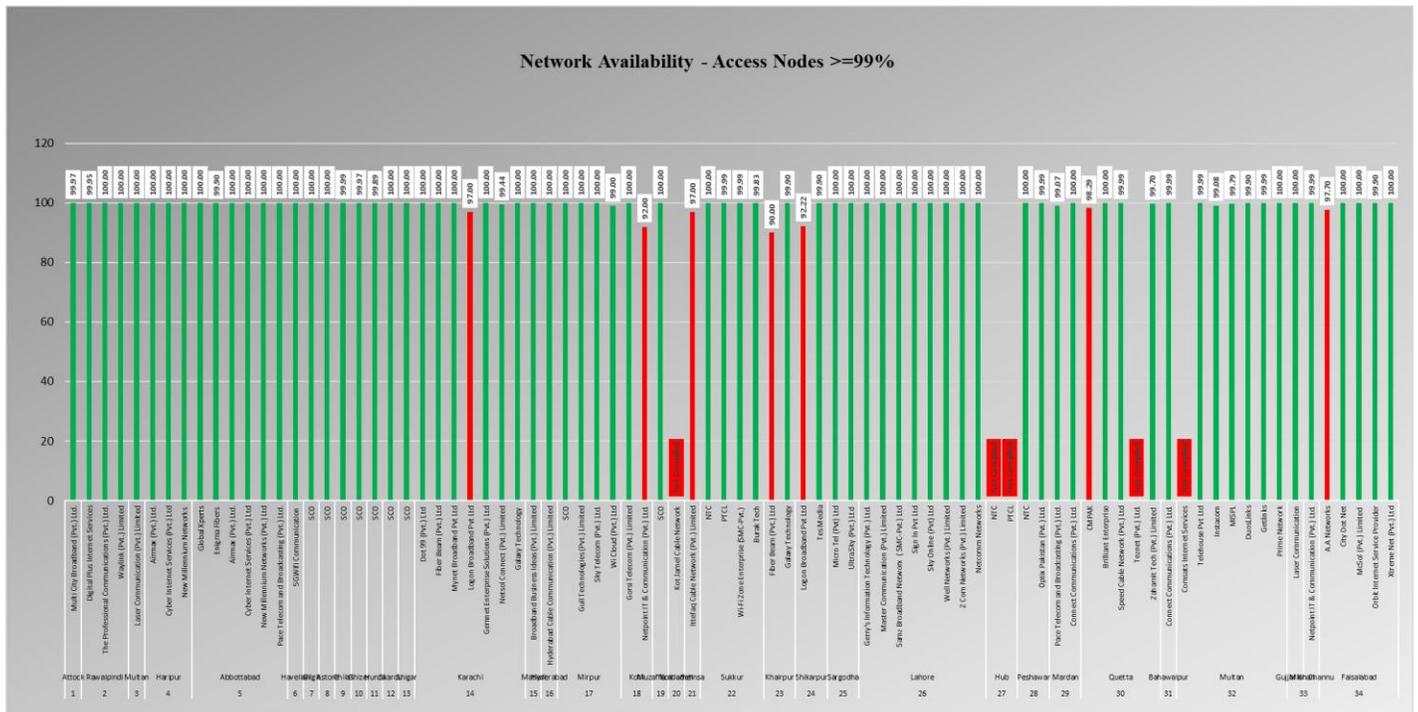

Results

Majority of operators comply with KPI i.e. Network Availability of Core Node. However, Sky Telecom, Wi Cloud, Net Point, Kot Jamel, Ittefaq Cable, Burak Tech, NTC (Hub Peshawar), PTCL(Hub), Optix, Pace telecom, Connect Communication, CMPak, Teznet, Zahmit Tech, and Comsats are not complied with KPI's threshold.

b) Network Availability – Access Nodes

Access Nodes include MSAGs/MSANs, DSLAMs, ONUs, etc. along with their Operational Minutes and Down Time Minutes.

Results

Majority of operators comply with KPI i.e. Network Availability of Access Node. However, Logon (Karachi & Shikarpur), Net Point, Kot Jameel Net, Ittefaq Cable, Fiber Beam, NTC (Hub), PTCL (Hub), CMPak, Teznet, Comsats and A.A Networks do not comply with the KPI threshold.

iii. Network Latency / Round Trip Time (RTT)

Latency or Round Trip Time (RTT) is the measure of duration of round trip for a data packet between specific source and destination. It is used to measure the delay on a network at a given time. The greater the latency within a network, the longer it takes packets to reach their destination.

Benchmark

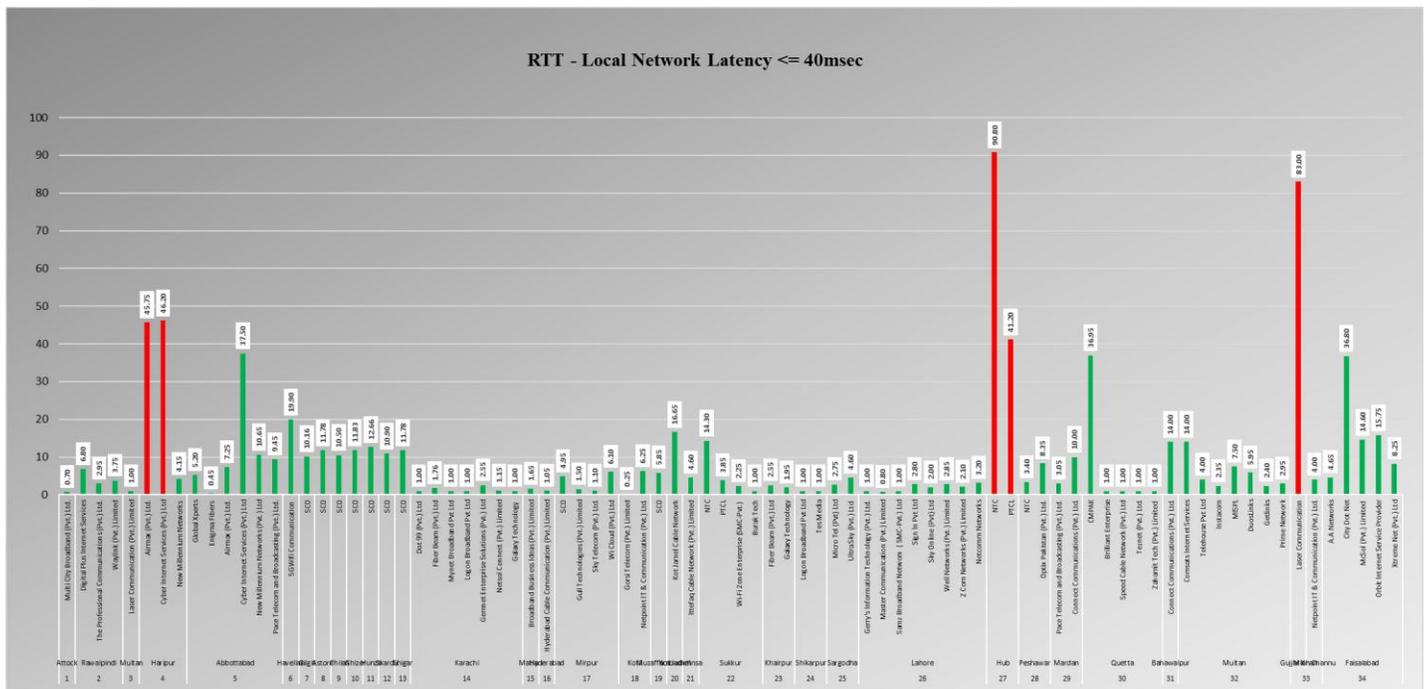

Network Latency in Segment	Threshold
Local Network Latency	=40 msec
International Segment – Terrestrial	=110 msec

Measurement

The RTT test shall be conducted using "ping" based on a minimum standard packet size of 32 bytes, and should be measured up to the edge node of the network, connected to the Internet cloud or any other server decided by the Authority.

a) Round Trip Time (RTT) – Local Network

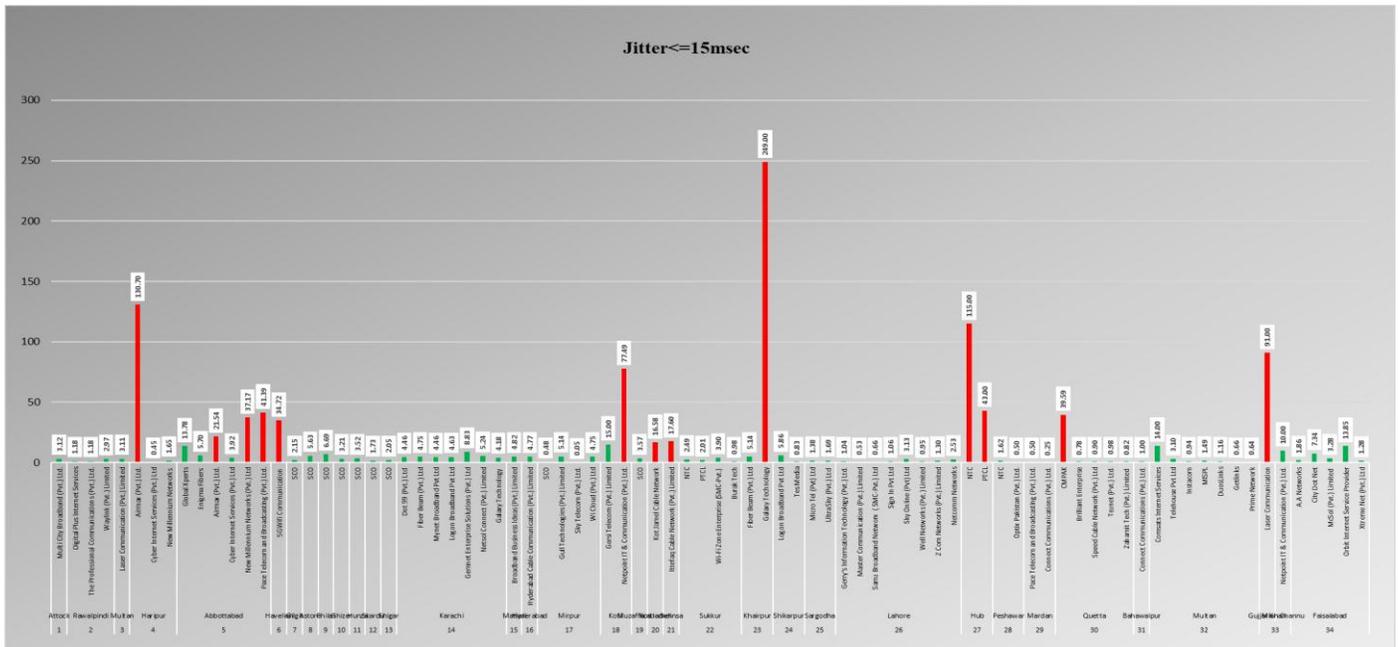

For calculating the Local Network Latency, obtain IP address of BSP's BRAS and run command "ping xxxx.xxxx.xxxx.xxxx -n 100" in DOS Prompt / mode. (xxxx here refers the IP address of the BRAS).

Results

Majority of operators comply with KPI i.e. Round Trip Time for Local Network. Air Max Cyber Net, NTC (Hub), PTCL (Hub) and Laser Communication do not comply with KPI threshold value.

$$\text{Jitter (msec)} = X (\text{RTTavg}-\text{RTTk})/100 \text{ (magnitude shall be used without *+/-' signs)}$$

Results

Majority of operators comply with KPI i.e. Jitter. However, Air Max (Haripur & Abbottabad), New Millennium, Pace Telecom, 5G Wifi, Netpoint, Kot Jameel Net, Ittefaq cable, Galaxy Technology NTC (Hub), PTCL (Hub), CMPAK and Laser Communication do not comply and are exceeding their KPI threshold value.

6. KPIs Analysis

• Bandwidth Utilization

Network of some of BSPs is found to be congested due to high bandwidth utilization especially during peak hours, which results in lower internet speeds for subscribers, affecting overall service quality and user experience.

• Latency

- On the **local segment**, high latency was observed in the networks of Air Max Cyber Net, NTC (Hub), PTCL (Hub) and Laser Communication.
- On the **international segment**, latency was found to be significantly high for New Millennium, SCO, Ittefaq Cable, and NTC (Hub), Instacom and Prime Networks indicating inefficiencies in international routing and network performance.

- **Jitter**

High for Air Max (Haripur Abbottabad), New Millennium, Pace Telecom, 5G Wifi, Netpoint, Kot Jameel Net, Ittefaq cable, Galaxy Technology NTC (Hub), PTCL (Hub), CMPAK and Laser Communication, impacting real-time services such as video conferencing and online gaming.

- **Network Availability**

- For **Access Nodes**, network availability is below the threshold for Logon (Karachi & Shikarpur), Net Point, Kot Jameel Net, Ittefaq Cable, Fiber Beam, NTC (Hub), PTCL (Hub), CMPak, Teznet, Comsats and A.A Networks.
- For **Core Nodes**, network availability is below the threshold for Sky Telecom, Wi Cloud, Net Point, Kot Jameel, Ittefaq Cable, Burak Tech, NTC (Hub Peshawar), PTCL(Hub), Optix, Pace telecom, Connect Communication, CMPak, Teznet, Zahmit Tech, and Comsats.

7. Conclusion

The KPI analysis indicates that some Broadband Service Providers (BSPs) are facing performance challenges across multiple network parameters. **High bandwidth utilization**, especially during peak hours, has led to network congestion and slower internet speeds, significantly degrading user experience. Additionally, **high latency** was observed in both **local** (Air Max Cyber Net, NTC (Hub), PTCL (Hub) and Laser Communication) and **international segments** (New Millennium, SCO, Ittefaq Cable, and NTC (Hub), Instacom and Prime Networks), pointing to inefficiencies in routing and backbone performance. **Jitter levels** were also found to be elevated for several BSPs—including Air Max, New Millennium, 5G Wifi, PTCL, and others—negatively affecting real-time applications such as video conferencing and gaming. Furthermore, **network availability** for both access and core nodes fell below acceptable thresholds for multiple providers, including Net Point, Kot Jameel Net, Ittefaq Cable, NTC, PTCL, CMPak, and others, indicating service reliability issues.

In response, non-compliant BSPs were formally notified and provided with detailed KPI performance data to highlight deficiencies. These insights are intended to guide network optimization efforts, including bandwidth management, infrastructure upgrades, and routing improvements. By addressing these performance gaps, BSPs can enhance network stability, meet regulatory standards, and deliver a higher quality of service to end users.
